

EN Interior Solutions

Tradition: A driving force for innovation.

135 YEARS OF EXPERIENCE TO DRAW ON

BURG is a family business that is now in its fourth generation of management. Thanks to its padlocks, the company made a name for itself: The first handcrafted BURG lock was already sold back in 1890.

Today, BURG relies on innovative mechanical and electronic locking system solutions for industrial manufacturers of metal products, office furniture, fittings and electrical enclosures.

On the other hand, BURG develops complete solutions for its interior clients, such as fitness and wellness facilities or organizations with large office landscapes.

By the way, behind the brand BURG stands a strong team: 230 employees at two locations, who give everything every day - for enthusiastic customers!

CONVINCING ARGUMENTS

Best quality

One thing has not changed over the years: our claim to quality. BURG manufactures according to the high requirements of DIN ISO 9001: 2015.

Solutions from a single source

Whether solutions with keys or electronic locking systems - with BURG you get development, production, assembly and service from a single source.

Made in Germany

Since its foundation BURG manufactures on the edge of the Ruhr area. „Made in Germany“ is part of BURG's DNA.

For each market the best solution.

MARKETS WITH VERSATILE NEEDS

BURG knows your sector and has the right solution:

Industry

BURG offers solutions for employee lockers. The focus is on minimizing costs and optimizing the use of space. The high flexibility of the locking systems makes it possible to place lockers where they are really needed.

Health

In the health care sector, flexibility is required. BURG locking systems adapt to the situation, no matter if staff or patient, permanent or limited use permission. Without a complicated key management.

Smart Office

Personal documents safely stowed away while desk-sharing? The intelligent and space-saving locking systems from BURG can be easily integrated into existing infrastructures such as access management and time recording.

Schools

The modern school class is no longer found in just one room. BURG locking systems offer the possibility to safely store personal belongings and school materials in lockers. Charging facilities for laptops and tablets included.

Universities and libraries

Know that your valuables are safely stowed away during learning and use your library card as an access medium. With systems from BURG there is no need for complex key management, so that the focus is on the essentials.

Other sectors are clubs, public spaces, bicycle stations, shopping centers, last mile, end-of-trip...

As a customer of BURG you benefit from our experience in the realization of various interior projects:

Intelligent locking systems that make an impression.

ELECTRONIC LOCKING SYSTEMS

Corona

The Corona is the electronic RFID locking system with an attractive rotary knob for convenient and secure locking of lockers or valuables compartments. LEDs in the rotary knob indicate the locking status. Thanks to its variable adjustability, the Corona is particularly easy to retrofit into existing changing room landscapes.

The solid construction of the latch and housing of the Corona provides unprecedented security: thanks to its Zamak components, the lock can easily withstand a force of at least 800 Newton. This quality contributes to the sense of security of your users.

Advantages:

- can be used in wooden and metal doors (indoor)
- latch system - door locks when pushed
- integrated LED locking indication
- high-quality and stable workmanship (metal housing)
- various programming options
- can be integrated into existing transponder systems (MIFARE® classic, MIFARE® Desfire, MIFARE® Plus, HITAG S/1, Ultralight, Smart MX, Legic Advant, HID iClass, HID Seos, EM4102 according to ISO 14443 and ISO 15693)
- available as wireless networkable version with B-on-air

Combipad

The high-quality electronic Combipad combination code latch lock sets the standard for the secure storage of valuables indoors. This code-proof lock with selectable functions not only makes everyday life easier, but also stands out with its elegant design, the robust and fireproof stainless steel keys, and with the ergonomic turning knob.

The solid housing cast in zamak and the flat numeric pad with laser-etched numerals ensure effective protection against damage, wear and tear, even at high frequencies of use.

Advantages:

- high-quality metal housing (Zamak) with stainless steel keys
- can be used in wooden and metal doors (indoors)
- latch system - door locks when pushed
- high battery life (60,000 closing cycles)
- LED locking indication
- simple configuration and programming
- ergonomic rotary knob and high-quality design
- optionally with integrated real-time clock for various time settings
- available in all RAL colors

Your premises visibly secure, at any time.

INTERNET OF THINGS

Retrofitting wireless locker locks while enjoying all the benefits of a networked system, is that possible? Yes of course!

BURG is complementing its proven range of code and RFID locks with energy-efficient wireless technology. Whether in locker cabinets, deposit boxes or output terminals - the locks of several systems, departments or locations can be monitored and controlled wirelessly via an encrypted online platform. Each assignment is displayed clearly. Compartments can be locked, released or reassigned. The locking systems are not cabled themselves and therefore remain even mobile. That saves time and money! And by the way, when the battery power drops or somebody attempts to break in, the system immediately reports an error message.

BENEFITS OF B-ON-AIR

Central Administration

Reduce staffing costs by managing the entire locking system environment in the cloud through your browser.

Flexibility

B-on-air allows easy retrofitting without having to tear down walls and lay cables. Also, existing cabinets usually do not need to be renewed.

Transparency

The live messages give you an overview of the status, user operation and capacity utilization of your system at any time, even on the go. A low battery status of the locks or a tampering attempt leads to an alarm.

Availability information

Inform users about available compartments, e.g. on a screen in the reception area. This reduces the time spent searching, especially at peak times.

Analyzability

B-on-air logs the opening and closing procedures. Statistics on the usage behavior of a single compartment or the entire system can be evaluated.

Updatability

The wireless connection of the locking systems allows to update the settings or the locking system software, e.g. if a new firmware is available.

Simple, uncomplicated and varied.

ELECTRONIC LOCKING SYSTEMS

TwinPad

The TwinPad electronic furniture lock offers the possibility of using the lock with code entry as well as with an RFID transponder solution (card, chip, wristband). The wireless locking system can be used in many ways. Thanks to the flexible installation options, the lock can be installed in both wooden and metal cabinets. The lock has an integrated LED locking indicator that flashes visible on the keypad when closed.

Advantages:

- dual mode: code and RFID access (MIFARE® Classic)
- Private Mode and Multi User Mode
- flexible installation (DIN-right / DIN-left / drawers)
- latch system - door locks when pushed
- slim front unit with metal frame
- auto alarm after 4 failed opening attempts
- emergency power supply via USB port (Micro-USB)

IntroCode

This code lock with clear keypad and attractive ergonomic rotary knob is a practical and reliable solution specially designed for easy installation in metal and wooden furniture. The lock is designed for retrofitting existing systems and offers a high level of security. With the flexibly adjustable latch, the lock easily adapts to any installation situation. The battery compartment, which is accessible from the outside, makes the battery replacement easier.

Advantages:

- ergonomic handling
- high-quality design
- external battery change
- easy to retrofit, e.g. for replacement of mechanical cam locks
- no additional transponder media necessary
- latch adjustable in 45° steps
- emergency power supply via USB port (Micro-USB)

PFITZENMEIER KARLSRUHE

With 10,000 square meters of floor space, this generously designed and exclusively equipped fitness and wellness resort is the flagship of the Pfitzenmeier corporate group. It was selected by the Deutscher Sportstudio-Verband (DSSV; "German Sports Studio Association") and the journal fitness MANAGEMENT international as the "2017 Facility of the Year." The high standard of the resort is also reflected in the changing areas: This is where Pfitzenmeier relies on the Corona RFID locking system from BURG.

No half measures.

SERVICE

Our service makes your job easier. We take care of the retrofit or the complete refitting of your furniture. Beyond the installation, you will enjoy our extensive service from the first consultation to the all-round maintenance service.

Choose a service package that suits you:

Service package 1: Installation Check

On-site, we analyze the current state of your premises in terms of security and organization.

Service package 2: Installation

Our team takes over the disassembly of the existing locks and the installation of your new smartlocks.

Service package 3: Maintenance

Maintenance of locking systems and battery replacement are performed regularly at your facility.

SECURITY AS A WHOLE

135 years of experience with safety. BURG sets standards in the secure closure of valuables with sophisticated design. BURG locking systems are now part of a whole network of security products.

Connected via various interfaces, locking systems from BURG offer the user great added value. In combination with complete system solutions such as access control, time recording, material dispensing and recharging stations, they make the daily life of the users easier.

TOGETHER WITH RELIABLE PARTNERS

In developing our system solutions, we work together with well-known network partners in various areas:

A Keypad won't leave you standing in the rain.

ELECTRONIC LOCKING SYSTEMS

Keypad IP54

The Keypad is the new compact electronic numeric code lock with vandal-proof silicone keypad. Due to its innovative housing, the Keypad is well protected against weather and environmental influences. Regardless of whether rain or jet water - the housing effectively protects against moisture. In addition, the innovative seals prevent the entry of dust or sand. This smartlock meets the requirements of protection class IP54.

The use is more than simple: Users enter their code, confirm the entry with the check mark button and the lock closes. If the lock is locked, the red status LED flashes clearly visible in the input area of the keyboard. Up to 9,999 number combinations are programmable.

Advantages:

- intuitive operation
- IP54 protection (even with salt water)
- UV and corrosion protection
- compact dimensions (11mm surface / 24mm installation depth)
- simple installation with only one screw
- high battery life (45,000 cycles)
- emergency opening function with Master Code

Whether in charging stations for e-bikes, notebooks or mobile phones - the Keypad cuts a fine figure, even in the harshest environments with high humidity. This opens up new possibilities. For some years, the outdoor gym movement has been growing. Outdoor training is finding more and more followers. The Keypad is the ideal solution for those who want to train on the beach, in the city park or in the woods and want to safely lock their valuables at the same time.

A competent partner, there for you.

KNOW-HOW AS A TRADEMARK

From the individual planning of a wirelessly networked office locking system landscape to the studio concept with changing cabinets and turnstiles - customers who are looking for real added value feel at home with BURG. This is what our nearly 135-year history stands for, as well as our claim to offer each customer the optimal solution for their challenge.

A BURG customer receives the entire value chain of German brand quality from a single source. For example, our specialist team for interior projects at the Volmarstein site consists of experts who can apply their know-how in a targeted manner, from the development of the locking system through sales to service. This enables optimal solutions and fastest reaction times. Convince yourself!
