

A close-up photograph of a hand interacting with a modern, metallic door handle. The hand is positioned on the left side of the frame, with the thumb and index finger gripping the handle. The handle is a sleek, rectangular, brushed metal piece. The background is a soft, out-of-focus blue-grey color. The overall aesthetic is clean and minimalist.

A new dimension.

Intro.Code

No frills were deliberately left out when developing the range of functions. The Intro works simply and self-explanatory.

Intro.RFID

The Intro.RFID was developed for the most common RFID standards, Mifare® Classic 1K and Mifare® Desfire EV II. The transponder media used are only read, not written.

INTRO

Intro is the entry into a new dimension of digital security for steel and wooden furniture.

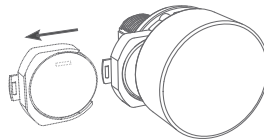

Value

The Intro impresses with its selection of high-quality materials. Especially the solid metal knob convinces with its galvanic surface.

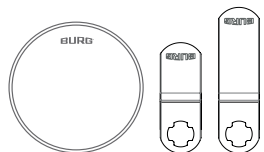

External battery replacement

The batteries can be changed from the outside, without unlocking. This ensures greater flexibility when it comes to maintaining the compartments.

100% compatibility

With the Intro, all BURG steel deadbolts can be used. Installation and assembly do not differ from classic mechanical solutions.

Retrofit-Ready

Almost all locker locks use a 16mm x 19mm mounting hole. Retrofitting is very easy here. Mechanics out - electronics in.
